

## Criteria a

assigned one leader, gave that person authority and responsibility, and held that person accountable for the quality of the prototype submitted

*Doing What's Right—Doing What Works*

Criteria a:

assigned one leader, gave that person authority and responsibility, and held that person accountable for the quality of the prototype submitted

## Product Vision

My Health Alerts helps individuals and caregivers stay up to date on all reported recalls and side effects for medications and health devices. Users will be able to search for and add to their dashboard medications and/or devices they are currently using or have used in the past. Users will also have the ability to sign up to receive alerts in the future as they are reported and view a dashboard with charts on historical data.

## Who will be involved?

The team will consist of nine team members who will complete the tasks as related to their role. In addition to the core team we have also identified a total of five internal end users who helped develop the vision for My Health Alerts, provided subject matter expertise, and were available throughout the process to provide input and conduct testing. We assigned a product owner who will have authority to set priorities and maintain accountability for the final delivered product.

## What the Team will commit to?

The following ground rules have been agreed upon and committed to by our team to make this process as smooth and efficient as possible:

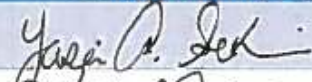

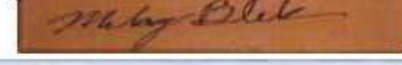

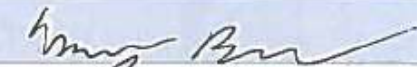

- Respect one another
- Work closely with our users in order to gather requirements and incorporate their feedback throughout the process
- Respect core working hours of 8am - 6pm
- Work in a co-located environment and allow for Video TeleConference when necessary
- Attend all meetings on-time and actively participate
- Openly communicate and share thoughts, comments, and questions throughout the process

Criteria a:

assigned one leader, gave that person authority and responsibility, and held that person accountable for the quality of the prototype submitted

Who will do what?

| Name                     | Project Role  | Expertise  | Commitment Signature   |
|--------------------------|---|--|--|
