For the best of reasons

Criteria m
set up or used configuration management

*Doing What's Right—Doing What Works*

set up or used configuration management

Both the internal virtual machine (for development) and the externally-facing virtual machine (for public consumption), hosted in the Noblis Innovation and Collaboration Center, are tied into the Puppet configuration management system. Periodic checks are run every 30 minutes to ensure compliance with the desired configuration management scheme. The following screenshots are taken directly from the dashboards for both systems.
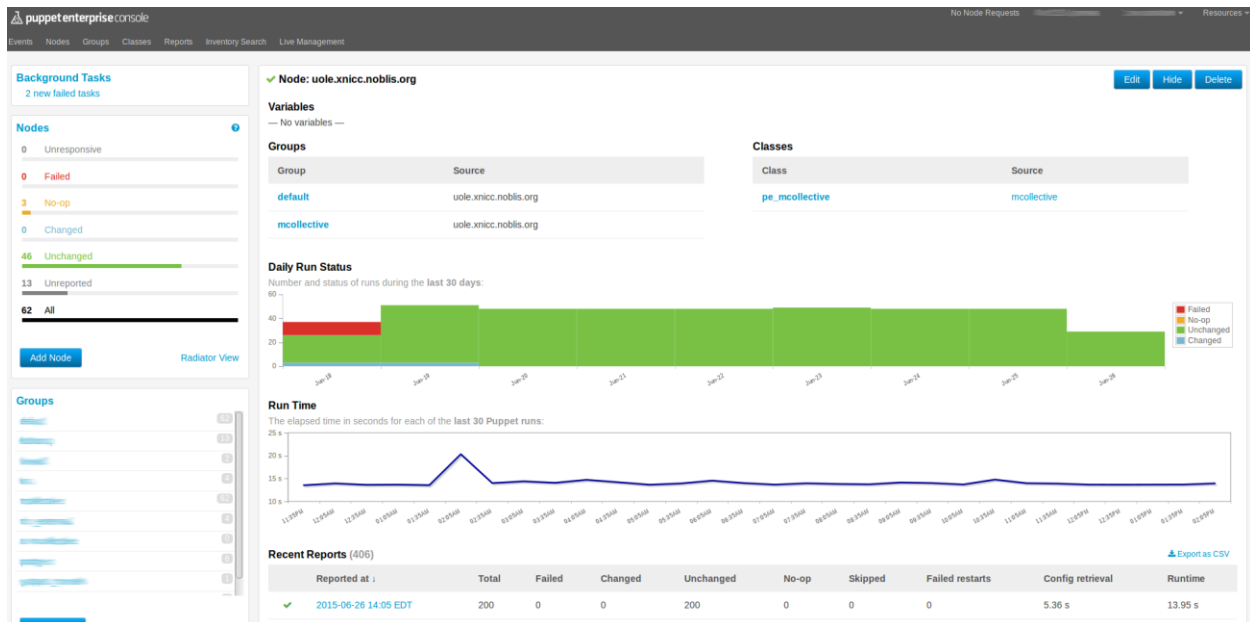

Puppet console page for Uole (externally facing Tomcat host).

Criteria m:
set up or used configuration management
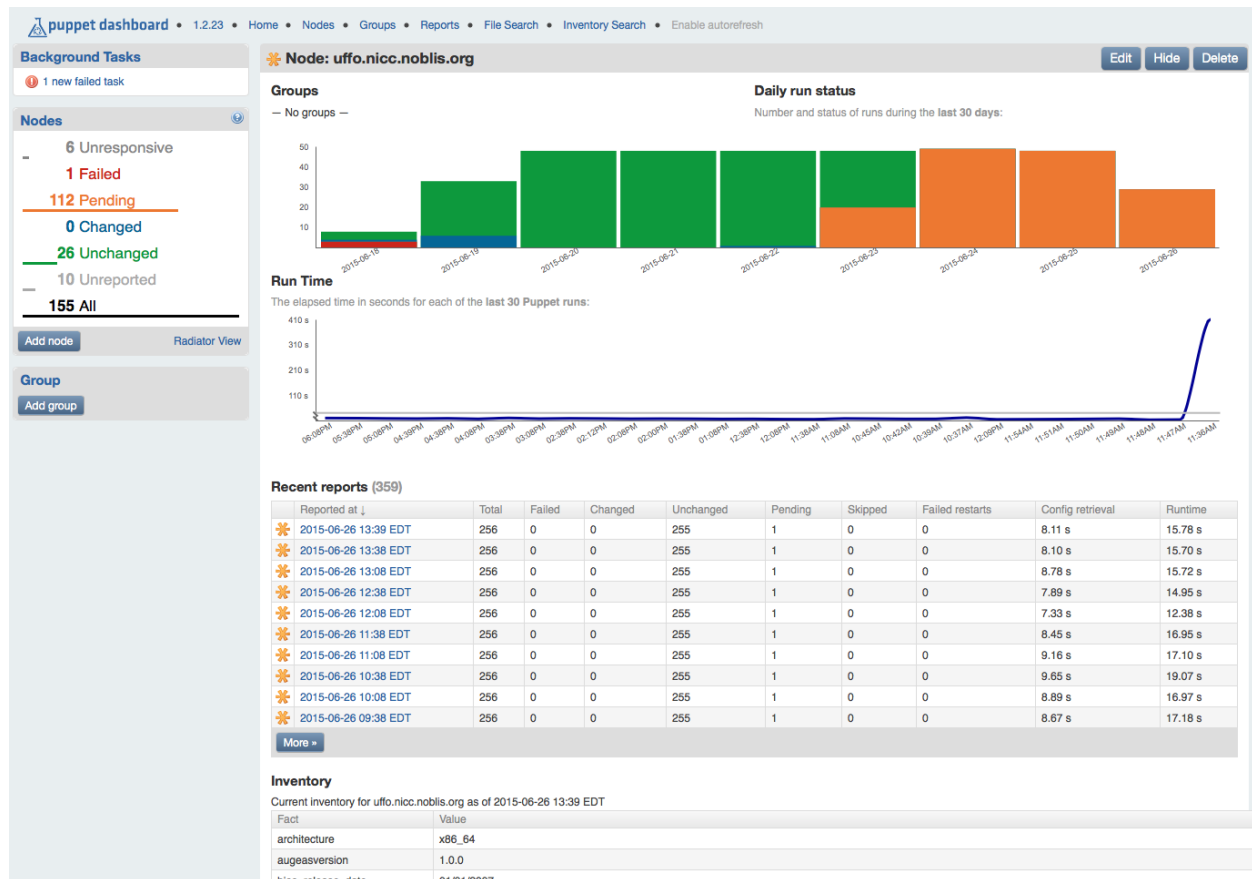

Puppet console page for Uffo (Internal Jenkins CI/CD host).
